

Tachometers, Speedometers for 2000-2003 Correct Crafts

Teleflex no longer offers or services the digital tachometer or speedometer used in 2000-2003 model year Correct Crafts.

However, the Teleflex Premier Pro Series gauges* will operate well in the same dash panel application. The gauges have a fog resistance lens, sealed against water intrusion from rain or normal wash down, have domed lens to prevent standing water, and the bezel is black.

The instrument dial lights red and the pointer lights bright white at night for excellent visibility.

The tachometer is available in 6000 RPM as part number 62724P. It will use the same tachometer wires in the boat now. The plug does need to be removed from the tachometer harness and ring terminals installed on the wire ends to connect to the new tachometer.

The speedometer is available in 65 MPH as part number 62722P or 50 MPH (as a special order) as part number 84510K. It will use one of the two pitots on the transom. By pass the Speedometer Electric Module. You will not need it, or the speedometer wiring harness. Since the speedometer has only the light that is electrical, you can jump those two connections to the tachometer.

Teleflex analog gauges have offered boat builders quality products for 40 years and is the choice replacement products for retailers such as West Marine, Boater's World, Bass Pro, etc. We are certain these gauges will work well in your boat too.
