

MULTI-FUEL GAUGES OR MULTI- FUEL TANKS

Veethree does not offer a Dual Station fuel sender for multiple gauge or multiple fuel tanks. The addition of a Single Pole, Double Throw (SPDT) toggle switch such as the Sierra Marine # TG40180 can help you complete the installation.

The Switch makes it possible for one gauge at the station you are normally operating from, but never both. This way the accuracy is maintained. This works in reverse when there is only one gauge with twin tanks.

The Veethree tank sender #90424P can accurately support only on gauge at a time. A second gauge (for upper station) or second tank sender can be used with the SPDT switch. Examples of both situations are shown.
